

U.S. VACCINES MADE WITH ABORTED FETAL CELLS

DID YOU KNOW at least 11 vaccines in the U.S. are made using **human fetal cell lines developed from aborted babies**? The cell lines are called WI-38 & MRC-5. Some vaccines contain RA 27/3 rubella viral strain (also developed using aborted babies). More are in development, including 5 COVID-19 vaccines using human fetal cell lines HEK-293 and PER.C6.

1 ADENOVIRUS (WI-38)
Adenovirus (used in military)

2 HAVRIX (MRC-5)
Hepatitis A

3 IMOVAX (MRC-5)
Rabies

4 MMR-II (WI-38 & RA 27/3)
Measles, Mumps & Rubella

5 PENTACEL (MRC-5)
Diphtheria, Tetanus, Pertussis, Polio & Haemophilus Influenzae Type B

6 PROQUAD (WI-38, RA 27/3 & MRC-5)
Measles, Mumps, Rubella, & Chickenpox

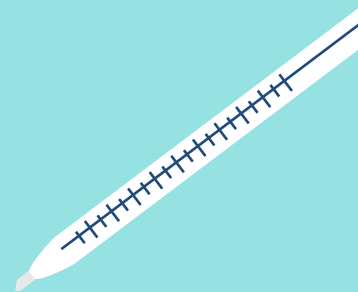

7 QUADRACEL (MRC-5)
Diphtheria, Tetanus, Pertussis & Polio

8 TWINRIX (MRC-5)
Hepatitis A & Hepatitis B

9 VAQTA (MRC-5)
Hepatitis A

10 VARIVAX (WI-38 & MRC-5)
Chickenpox

11 ZOSTAVAX (MRC-5)
Shingles

DID YOU KNOW?

Over 100 aborted babies were used during the research & development of WI-38, MRC-5 & RA 27/3. Research using aborted babies continues. Vaccines using these cell lines contain both male & female DNA. Research from Corvelva found the entire human genome in the vaccine it tested.

RELIGIOUS OBJECTIONS

People with deeply held religious beliefs from different faith traditions have objections to vaccines that use aborted fetal cell lines.
