

Are You Part of the COVID-19 Experiment?

Timeline: COVID-19 Vaccine Clinical Trials & FDA Emergency Use Authorizations

*The U.S. COVID-19 vaccines were **authorized** (not FDA approved) for mass emergency use almost **2-3 years before phase 3 clinical trials are scheduled to end**. Initial studies are not complete & long-term reactions are unknown. How can safety be known? To take the vaccine is to enroll in a COVID-19 vaccine trial.

*All three vaccines carry risk, so adverse reactions & deaths are tracked through the CDC/FDA's official system called the [Vaccine Adverse Events Reporting System \(VAERS\)](#). To date, VAERS shows [623,341 cases reporting adverse reactions](#), including **13,627 deaths**, [17,794 disabled](#), and [1,671 miscarriages](#) (as of 08.20.21).

*The overall survival rate from COVID-19 is over 99% (it's 95% for the elderly). If you're likely to survive COVID then **is it worth the risk** to take one of the non-FDA approved, experimental vaccines (using new vaccine technology) that are known to cause severe adverse reactions and even death? **Pfizer was approved 8.23.21.
