

# U.S. VACCINES MADE USING ABORTION-DERIVED FETAL CELLS

***DID YOU KNOW*** at least 13 vaccines in the U.S. are made using human fetal cell lines developed from aborted babies? The cell lines are called WI-38, MRC-5, HEK-293 & PER.C6. Some vaccines use RA 27/3 rubella viral strain (also developed using aborted babies). Many more are in development, including COVID-19 vaccines using human fetal cell lines.

1 **ADENOVIRUS** (WI-38)  
Adenovirus (used in military)

2 **HAVRIX** (MRC-5)  
Hepatitis A

3 **IMOVAX** (MRC-5)  
Rabies

4 **MMR-II** (WI-38 & RA 27/3)  
Measles, Mumps & Rubella

5-7 **MODERNA, NOVAVAX, & PFIZER/BIONTECH** (HEK-293)  
COVID-19 \*(all are tested on HEK-293, but not used in vaccine)

8 **JOHNSON & JOHNSON** (PER.C6)  
COVID-19

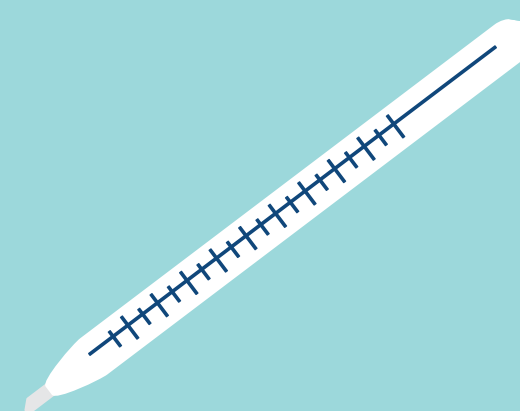

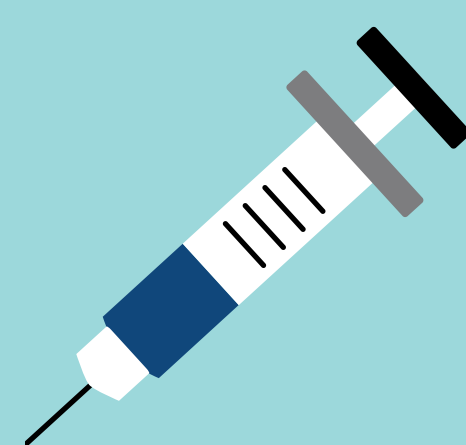

9 **PROQUAD** (WI-38, RA 27/3 & MRC-5)  
Measles, Mumps, Rubella, & Chickenpox

10 **TWINRIX** (MRC-5)  
Hepatitis A & Hepatitis B

11 **VAQTA** (MRC-5)  
Hepatitis A

12 **VARIVAX** (WI-38 & MRC-5)  
Chickenpox

13 **ZOSTAVAX** (MRC-5)  
Shingles

## DID YOU KNOW?

Over 100 aborted babies were used during the research & development of WI-38, MRC-5 & RA 27/3. Research using aborted babies continues. Vaccines using these cell lines contain both male & female DNA. Research from Corvelva found the entire human genome in the vaccine it tested.

## RELIGIOUS OBJECTIONS

People with deeply held religious beliefs from different faith traditions have objections to vaccines that use aborted fetal cell lines.
